

$$\iint_{A} \varphi dS = \iint_{A} \left( \varphi \left( \Phi(u,v) \right) \cdot \overline{\Phi}_{u} \times \overline{\Phi}_{v} \right) dA$$

Ejemplo: Sea  $F(x,y,z) = (-y^2, x,z^2)$  y sea T la curva de intersección entre y+z=2 y  $x^2+y^2=4$  orientada en dirección de las narecillas del rebj vista desde anita.

Calcule S F ds = (Stokes: SFds = STOXFdS

Sea D la prit del plano encerado por la curra con objetitación HACIA ABAJO. Como las compontes de F(x,y,x) son polinorios sabemos que el campo es dipreciale en todo IR3 y en priche D asítre podenos aplicar el Teo de Stobas:

$$\int \frac{1}{4\pi} = \int \int \sqrt{x} \, dx = \int \int (0,0, +2y) \, dx$$

$$\int \sqrt{x} \, f = \int \sqrt{2} \, \frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (+2y)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (-2x)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (-2x)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (-2x)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (-2x)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (-2x)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, (-2x)$$

$$\frac{2}{2x} \, \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, \frac{2}{2x} + \frac{2}{2x} \, \frac{2}{2x} + \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, \frac{2}{2x} + \frac{2}{2x} \, \frac{2}{2x} + \frac{2}{2x} \, \frac{2}{2x} + \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, \frac{2}{2x} + \frac{2}{2x} \, \frac{2}{2x} + \frac{2}{2x} \, \frac{2}{2x} = (0,0) \, \frac{2}{2x} + \frac{2}{2x} \, \frac{$$
