Hoy. Integales sobre curvas.

Fingeneal.

Engeneal.

Si el objeto C sobre el que integramos es una conva pounetrada en toras hay dos tipos de integrales fondamentales que dependon de qui objeto integramos:

(1) $f: \mathbb{R}^3 \longrightarrow \mathbb{R}$ función escalar $\int f ds =$

(2) Si $F: \mathbb{R}^3 \longrightarrow \mathbb{R}^3$ es un CAMPO VECTORIAL

 $\int_{C} F d\vec{s} =$

Hoy discohores: - Qué son? (1) (2) Ejemples.
- Coro ce calcula?

Ejerciio: Una viilla netalica semici-cla trene

denordad liveal en el ponto (x,y)

dada por g(x,y) = x². (a) Calcula la

masa tobal da la viilla.

(b) Calcula la posició da cuta de masa.

(x,y)

x²ty²=100

(0,y)

(10,0)

(1) Posersonon: (T(t) = (10 (os (t) 10 Sir(t))

$$S(x,y) = x^{2}, \quad g(\sigma(H) = 1000 C_{0}^{2}(H))$$

$$= \int_{0}^{\pi} 100 C_{0}^{2}(H) \cdot 10 dt = 1000 \left(\int_{0}^{\pi} C_{0}^{2}(H) dt \right)$$

$$\sigma'(H) = \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \left(-10 \int_{0}^{\pi} h H, \quad 10 (o_{0} \ln) \right)$$

$$= \int_{0}^{\pi} \frac{1}{2} \int_{0$$

Ejerus: Calcule el talajo realizado

For el campo de perm
$$F(x,y) = (-y,x)$$

a lo lorgo de la cura Orientada

del disjo

 $F(x,y) = (-y,x)$
 $f(x,$
